

Access controlled... Future secured.

The automation of entrance control in a building or at the boundary of a site makes it possible to achieve higher passage flow while increasing security and reducing operating costs.

Automatic Systems offers a full range of innovative and discretely designed pedestrian products combining security, speed, user safety and high reliability.

TRIPOD TURNSTILES

Our easy-to-use, robust tripod turnstiles with a low profile design provide automatic access control for high traffic sites.

Also available in glass for sophisticated corporate environments.

FULL-HEIGHT TURNSTILES

Used primarily to secure the perimeter of fenced outdoor sites, full-height turnstiles promote single passage and are extremely weather resistant.

SWING GATES

The perfect complement to security entrance lanes, the swing gates offer emergency egress while accommodating the people with reduced mobility and service staff.

SECURITY ENTRANCE LANES

Security entrance lanes are designed to achieve maximum pedestrian throughput while offering a high level of security. Their discreet, modern styling coordinates perfectly with corporate and public environments.
