

CLIENT CASE STUDY

Automatic Systems Installs Tripod Turnstiles at Places Gym Chesterfield

SUMMARY

End user

Places Gym

Integrator

Omega Security Systems

Location

Chesterfield, UK

Challenge

- Replace existing turnstiles not fit for purpose

Solution

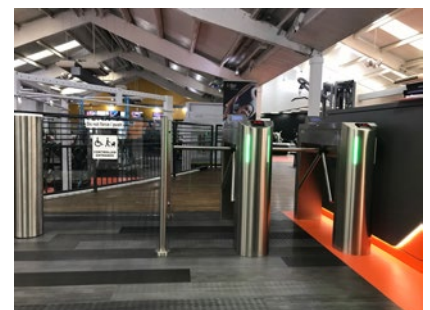

- Installation of Automatic Systems tripod turnstiles

Background

Places for People Leisure is a leading leisure and wellness partner delivering fitness, sport, well-being and health. Their focus and passion is about helping local communities stay fit and active. In May 2015 the company entered the low cost gym sector launching a community gym brand called "Places Gym" and now has six Places Gym within its leisure portfolio.

Situation

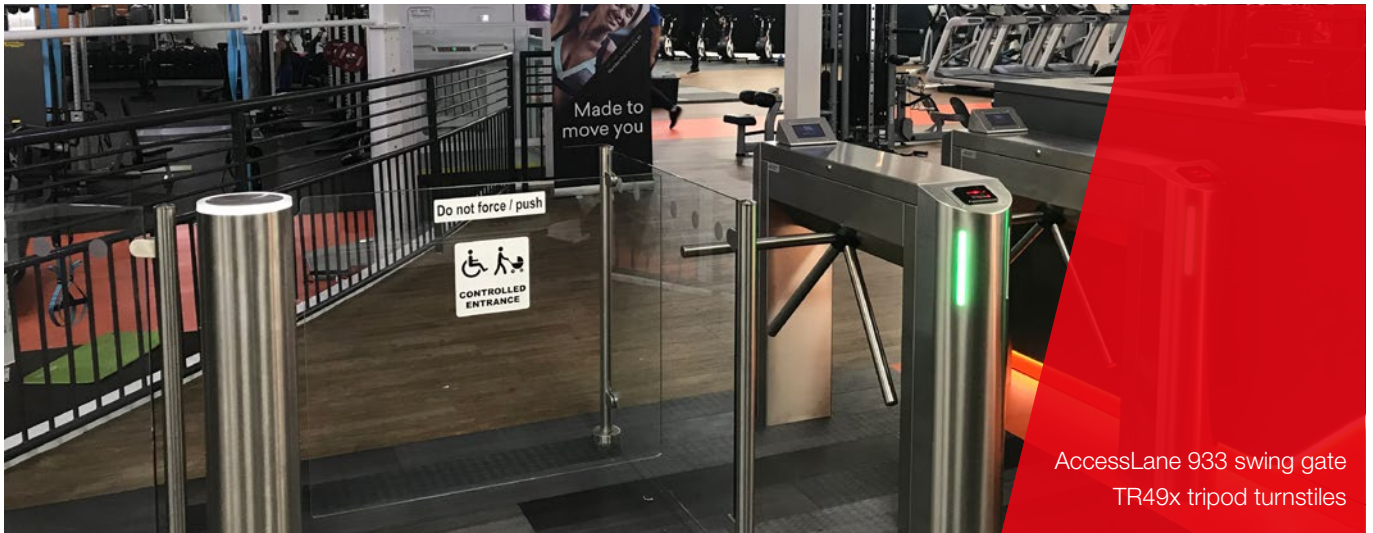

Places Gym Chesterfield, one of the six gyms within their portfolio, was in need of extensive refurbishment to bring it in line with their current brand. The gym already had existing turnstiles however these were not fit for purpose and required replacing as part of the refurbishment fit out.

Tender Process

Omega Security Systems who has a long standing relationship with Places for People Leisure were the natural choice to provide the security set up and due to their solid relationship with Automatic Systems came to us to provide the turnstile element of the project whilst Omega provided the access control solution.

Solution

Following a site visit and extensive talks with all parties involved Automatic Systems put forward their waist height tripod turnstiles and disabled access gate as the best product for the gym. The increased durability of the tripod turnstiles controls high throughput, a must for any premise like a gym. The tripod also integrated well with Omega Analytic Systems AGD turnstile system.

TR49x Tripod Turnstiles

The security solution provided ensured a more secure access to the gym whilst improving customer experience by allowing customers to access the building quickly and effortlessly. The new security system also reflected the corporate brand Places for People were wanting to bring to the gym.

Works were completed within the allocated time allowed with no problems.

Tripod Turnstiles

Bi-directional turnstile made especially for quick access control in areas with high traffic but limited space.

An anti-panic system moves the arm from the horizontal to vertical position, thereby completely freeing the lane in the case of an emergency evacuation.

Non-removable stainless steel arms to prevent vandalism.

Durable, corrosion-resistant, heavy-duty mechanism for extended service life.

“Places Gym Chesterfield required a modern and robust turnstile system which would offer them ease of access, but also greater security than their existing system. The Automatic Systems AL933 and TR490 units provided just that, with high quality, long warranty, and great aesthetics which fit perfectly into the new entrance layout”
Adam McGreal, Business Development Manager at Omega Security Systems.
